DETAILED ACTION

Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-9 is the inclusion of the limitation of a vehicle antenna comprising a high-frequency grounding member which is fixed to a conductive portion of the vehicle body so as to be capacitance-coupled for carrying out electric grounding with regard to a high-frequency component. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Lindenmeier et al. (U.S. Patent No. 5,049,892) teaches the pane antenna system has a plurality of antennas arranged on a non-conductive sheet installed in a metal body of a motor vehicle. Each antenna connected to an input terminal of an assigned four terminal network. The four terminal networks are located on or in the proximity of the non-conductive sheet in the metal vehicle body. However, Lindenmeier et al. does not disclose or suggest a vehicle antenna comprising a high-frequency grounding member which is fixed to a conductive portion of the vehicle body so as to be capacitance-coupled for carrying out electric grounding with regard to a high-frequency component.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
